

In the September 2015 issue of the *Journal of Athletic Training*, in the article,

Casa DJ, DeMartini JK, Bergeron MF, et al. National Athletic Trainers' Association position statement: exertional heat illnesses. *J Athl Train*. 2015;50(9):986–1000,

Table 4, item 9b should read as follows:

"An approximate estimate of cooling via cold-water immersion is 1°C for every 5 min and 1°F for every 3 min (if the water is aggressively stirred). For example, someone in the tub for 15 min would cool approximately 3°C or 5°F during that time."

We regret the error.
